Art Unit: 1753

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 through 4, drawn to a polymer material, classified in class 106, subclass 287.1.
 - II. Claims 5 through 7, drawn to a method of making a polymer mixture, classified in class 523, subclass 200.
 - III. Claims 8 through 11, drawn to a display apparatus, classified in class 362, subclass 559.
 - IV. Claims 12 through 16, drawn to a photovoltaic cell, classified in class 136, subclass 243.

The inventions are distinct, each from the other because of the following reasons:

- 2. Inventions II and I, III or IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the products of groups I, III and IV can all be made by a different process than the method of group II, as these products do not require the polymer or solvent used in the method of group II and can be made from a number of polymers or solvents.
- 3. Inventions I, III and IV are directed to related products. The related inventions are distinct if the (1) the inventions as claimed are either not capable of use together or can

Application/Control Number: 10/645,022 Page 3

Art Unit: 1753

have a materially different design, mode of operation, function, or effect; (2) the inventions do not overlap in scope, i.e., are mutually exclusive; and (3) the inventions as claimed are not obvious variants. See MPEP § 806.05(j). In the instant case, the inventions as claimed can have a materially different design, mode of operation, function and effect. The display apparatus of group III and the photovoltaic cell of group IV have different modes of operation and require different elements for the products to work. A reference that anticipates one group does not necessarily anticipate the other group, thus why the groups have different classifications. Furthermore, the inventions as claimed do not encompass overlapping subject matter and there is nothing of record to show them to be obvious variants.

- 4. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
- 5. Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
- During a telephone conversation with Kelly Kordzik on December 14, 2006 a provisional election was made with traverse to prosecute the invention of group I, claims 1 through 4. Affirmation of this election must be made by applicant in replying to this

Art Unit: 1753

Office action. Claims 5 through 16 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Claim Rejections - 35 USC § 102

8. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 9. Claims 1 through 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Clark, Jr. (U.S. 6,049,090).

Clark, Jr. discloses a semiconductor electroluminescent display.

Regarding claim 1, Clark, Jr. discloses a host matrix in which is embedded particles (column 5, paragraph 3), the particles being nanoparticles (column 4, paragraph 3). Clark, Jr. further discloses the host matrix can be a polymer (column 7, paragraph 5).

Regarding claim 2, Clark, Jr. discloses the use of silicon nanoparticles as the particles in the matrix (column 8, paragraphs 1 and 2).

Application/Control Number: 10/645,022 Page 5

Art Unit: 1753

Regarding claims 3 and 4, figure 2 shows that the particles embedded in the matrix are trapped in holes and thus do not aggregate (column 10, paragraph 3).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. patents 5,720,827 and 6,515,314 contain teachings relevant to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Fick whose telephone number is (571) 272-6393. The examiner can normally be reached on Monday thru Friday 7 AM to 4 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam Nguyen can be reached on (571) 272-1342. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
